

MEZMO ENTERPRISE PLAN

**FOR ORGANIZATIONS THAT NEED
TO MANAGE OPERATING COSTS
AND WORK MORE EFFICIENTLY
ACROSS TEAMS**

OVERVIEW

Mezmo is a comprehensive platform to manage all of your observability data. It ingests, processes, and routes data to fuel enterprise-level application development and delivery, security, and compliance use cases- Organizations with more complex workflows need the right solutions in place to manage costs and enable cross team collaboration. Mezmo's enterprise plan offers dedicated support and access to advanced features to do just that. Learn what's included in the enterprise plan below.

INCREASE FLEXIBILITY AND CONTROL SPEND

Variable Retention allows you to retain logs in the Mezmo user Interface (UI) for only as long as they are relevant and then archive them for long-term storage. This helps reduce the cost of operation while ensuring that you have the information you need when you need it.

Examples of how you can use this include:

- ✦ Store previously excluded debug logs for a few days so you have context in the case of urgent incidents
- ✦ Store transaction audit logs for a whole month for compliance purposes
- ✦ Use a Usage Dashboard to track total usage for your account and see breakdowns for each Variable Retention tier

Learn more about Variable Retention in our documentation-

SEE KUBERNETES LOGS IN CONTEXT

Kubernetes Enrichment allows you to view your Kubernetes events and metrics alongside your logs in the Mezmo UI. With this information all in one place, you can pinpoint issues faster and skip the context switching between Mezmo and other tools. Learn more about Kubernetes Enrichment in our documentation-

CONTROL DEPLOYMENT ACROSS MULTIPLE TEAMS

Enterprise Organizations give users with large deployment scenarios more control along with the ability to fine-tune enterprise account setup to manage cost and usage. You can create parent and child accounts, add more users, and manage Single Sign-On (SSO) access and rules. Learn more about Enterprise Organizations in our documentation ·

TRAINING, EARLY ACCESS TO FEATURES, AND MORE

Having the right log analysis platform in place can mean the difference between resolving a business-impacting incident in minutes or weeks. Mezmo provides Service-Level Agreements (SLAs) for enterprise customers so that you know we'll be there when you need us. With an enterprise plan, you also have access to a dedicated customer success manager to help you optimize your account, enable new features, and provide user training. You also have early access to new features via our private betas so that you can help shape the future of our observability platform.
